B.Design - Creative Ability Test 2025 Previous Year Question Papers

Section: Communication Ability and English Comprehension

Directions (Q.1-Q.5): Read the following passage carefully and answer the questions that follow:

The colour of animals is by no means a matter of chance; it depends on many considerations, but in the majority of cases the choice tends to protect the animal from danger by rendering it less conspicuous. Perhaps, it may be said that if colouring is mainly protective, there ought to be but few brightly coloured animals. There are, however, not a few cases in which vivid colours are themselves protective. The kingfisher, though so brightly coloured, is by no means easy to spot. The blue harmonizes with the water, and the bird looks almost like a flash of sunlight as it darts along the stream.

Desert animals are generally the colour of the desert. Thus, neither the sparse trees nor the feeble undergrowth such as twigs and small branches provide even the slightest protection from their foes. Hence, a modification, requiring their colour blending with that of their surroundings, is absolutely necessary. Without exception, the upper plumage of every bird and also the skin of all snakes and lizards, is of one uniform sand colour.

The next point is the colour of mature caterpillars, some of which are brown. This probably makes the caterpillar even more conspicuous among the green leaves than would otherwise be the case. Let us see, then, whether the habits of the insect can protect it.

What would you do if you were a big caterpillar? Why, like most other defenceless creatures, you would feed by night, and lie concealed by day. So do these caterpillars. When the morning light comes, they creep down the stem of the food plant, and lie concealed among the thick foliage, dry sticks and leaves, near the ground, and it is obvious that under such circumstances the brown colour really serves as protection.

1. Identify the incorrect statement from the passage:

- (a) The kingfisher is a brightly coloured bird.

- (b) It is by no means easy to see the kingfisher.
- (c) The kingfisher looks like a flash of sunlight when it darts along the stream.
- (d) The kingfisher has a green coloured ring around the neck.

2. What is the primary subject of the passage?

- (a) The conservation of wildlife.
- (b) The planting of more trees and vegetation.
- (c) That the colouration of a bird or an animal is irrelevant.
- (d) That the colour of birds and animals is mostly adapted to match the background of their environment.

3. Choose the most appropriate meaning of the word 'conspicuous', used twice in the passage.

- (a) Immobile
- (b) Invisible
- (c) Noticeable
- (d) Sluggish

4. After reading the passage carefully identify the incorrect statement.

- (a) Caterpillars hide themselves under thick foliage in the daytime.
- (b) Some of the caterpillars are brown and some are grey.
- (c) The colour brown makes the caterpillar stand out in its natural habitat.
- (d) Caterpillars feed by night.

5. After reading the passage carefully, select the correct answer to the following question. Why is 'colour blending' important for the desert animals?

- (a) As the kingfishers are quick to dart into bushes.
- (b) As the colour of the desert changes during daytime.

- (c) As the sparse trees or feeble undergrowth offer little natural protection.
- (d) As food and water are scarce in the desert.

Directions (Q.6-Q.10): Read the given passage carefully and answer the questions that follow:

The fashion industry has seen a rise in alternative leather options, from fish skin to pineapple leaves to cork leather. High-end fashion brands like John Galliano, Prada, and Christian Dior have dabbled in fish skin options for their products; the practice itself has roots dating back centuries to multiple indigenous groups across the globe. Brands like Nanushka and Hugo Boss, meanwhile, have sought to use leather alternatives that are completely vegan.

Sustainable fashion aims to reduce pollution and waste in the manufacturing process while addressing overproduction and cutting down on CO₂ emissions. Sustainability is a complex concept, and faux leather only plays one part in the machine of sustainable fashion. While brands like Allbirds and Sojo have been transparent in addressing their environmental impacts, other brands have participated in greenwashing, promoting products as eco-friendly to consumers without actually improving their practices.

Vegan leather made from plastic materials like PVC and PU can still be harmful to the environment. But when made from natural materials, plant-based leathers make for great eco-friendly options. Additionally, vegan leather's lifespan is much shorter than real leather, so consider how often you'll be replacing this product when you do purchase it. Real leather does lead to high carbon emissions, but there are ways of making this kind of purchase a sustainable one. Taking good care of the product over time is essential. You can also aim to purchase your next leather good as a meat by-product with vegetable tanning, or from a producer that works with small farms.

Both forms of leather have ways to go in terms of sustainability, but by making an informed decision on your next leather purchase, whether it's vegan or not, you can contribute to their environmental impact.

6. According to the passage, which of the following high-end fashion brands have not dabbled in using fish skin options as leather alternative?

- (a) Christian Dior
- (b) Prada
- (c) Nanushka
- (d) John Galliano

7. What is the central argument of the passage?

- (a) The passage advocates the use of vegan leather and leather alternatives as they last for a long time and do not need to be replaced. This affects the profit margins of companies and slows down growth.
- (b) The passage addresses the complexities of sustainability, and advocates the use of leather alternatives. The passage argues that the use of real leather gives rise to animal cruelty, and calls for a worldwide ban.
- (c) The passage provides a nuanced perspective on the role of leather in sustainable fashion. It unpacks the environmental impact of different leather alternatives and argues that one must make an informed decision by considering the stage of production and materials used, while purchasing an item.
- (d) The passage focuses on the misleading practices that run rampant, in the sustainable fashion industry and advocates the need for complete transparency in addressing the environment.

8. Choose the most appropriate title for the given passage.
